

Unemployment Analysis in India — Pre & Post COVID-19

CodeAlpha Data Science Internship – Task 2

Prepared By

Rawal JayKumar NarendraKumar

Aspiring Data Scientist

Project Summary

This report presents an analysis of unemployment trends in India before, during, and after the COVID-19 lockdown using two CMIE unemployment datasets. The project includes data cleaning, exploratory data analysis, visualization, statistical analysis, and machine learning techniques to identify employment trends, assess the impact of COVID-19, and derive actionable policy recommendations.

Data Source

Centre for Monitoring Indian Economy (CMIE), distributed via Kaggle ('Unemployment in India'). All analyses are reproducible using the project source code.
